

Emily emigrated from England as a certified EP and Device Technologist, taking on the role of the inaugural Electrophysiology Technologist at St. Paul's Hospital in Vancouver. This was no easy task as the EP program at St. Paul's Hospital had been a nurse-led program for over 20 years. However, it is a credit to her knowledge, infectious outlook, positivity, and drive that she has since developed the dedicated EP Technologist program substantially since her arrival, establishing the value of EP Technologists in the invasive EP environment.

In addition, Emily has demonstrated local, national and international leadership. Within our health authority she has become to de-facto educational lead for arrhythmia care within allied health. She has since trained multiple Technologists on-site as well as through her role as an electrophysiology educator at the British Columbia Institute of Technology where she teaches two formal training courses (CARD 5301 and CARD5520). She has served on the communication committee of the Canadian Heart Rhythm Society, as well as several roles within the international Heart Rhythm Society Core Concepts in EP Committee, where she currently serves as co-chair.

This extensive list of accomplishments pales in comparison to the joy she inspires in all that have the pleasure of working alongside her. She is dedicated to her craft, and strives to make everyone's experience (patients, staff, and clinicians') better.
